(54) INK JET RECORDER

(57)Abstract:

PROBLEM TO BE SOLVED: To provide an ink jet recorder in which a desired glossiness can be obtained by controlling at least one of the heating temperature, applying pressure, carrying speed and pressing pressure for a recording medium having a resin layer on the surface thereby controlling the glossiness on the image plane of the recording medium.

SOLUTION: In a fixing means 4 for rendering the surface layer of a recording medium 1 transparent, heating of the recording medium 1 by a heating roller 41 is controlled to an appropriate temperature, pressure being applied by the heating roller 41 and a press roller 44 is controlled appropriately, carrying speed of heating belt 43 is controlled to an appropriate level, or the pressure of a pressing means 46 is controlled to an appropriate level in order to attain a desired glossiness and transparency. Glossiness on the image plane of the recording medium 1 can thereby be controlled arbitrarily resulting in an image print having a desired glossiness.
